

ATC INTERNSHIP AT ROCK HILL AQUATIC CENTER

By: Caleb Martin

WHAT DID I LEARN...

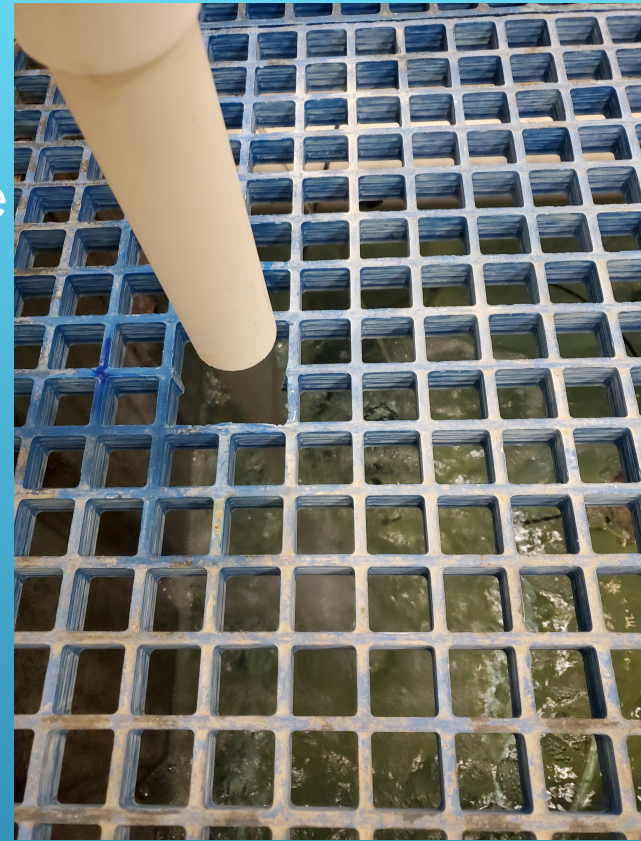

- ▶ A part of my internship was learning how to manage a facility. Under my supervisor I learned how to read the monthly expenditures and income to assess how the facility was operating. I also learned about how to communicate with the members and staff to help run the facility to the best of it's ability.

RUNNING A FACILITY

Another aspect of running this facility was keeping the pool operating properly. During my internship, I was able to experience times where the engines and machines were broken and was taught what to do in order to fix the pool.

EQUIPMENT AND MECHANICS

I was also taught how to read the chemical levels in the pool and how the chemicals are put into the pools to maintain a healthy pH balance.

CHEMICALS

- ▶ Due to the corona virus, I had to stop my internship when the facility had to close. Although I will no longer be able to be an intern, my supervisor has offered me a job and I am able to work for him when the facility opens back up.
- ▶ I would highly recommend the internship program at ATC and other classes at ATC. The classes offered allows students to have hands on experiences in multiple fields. I wish I took more classes at ATC because of how much knowledge and hands on experience ATC provide

EXPERIENCE
