

ATC INTERNSHIP PROJECT

DAVID MILES

JOB DESCRIPTION

- At Vac2Go, I am a Service Technician plus more. My duties include general maintenance on industrial Vacuum trucks, Diesel engines, and water blasting equipment. I am assigned day trips that are sometimes emergency pick ups. On these days, I'm responsible to deliver the trucks and water blasters to and from job sites and factories. (like in the picture). I also perform in house fabrication (which involves welding) of pipe fittings and other vacuum accessories.

EVIDENCE IN CAREER

- Commercial/Environmental cleaning is a term used by Industrial cleaning companies who are contracted by businesses, or corporations such as Duke Energy and Resolute. Cleaning companies can be found in pretty much every town and city in the US. Typically these companies market their services with a professional sales force, advertising, word of mouth, or websites. Anna Johnson has been doing a great job at Vac2Go in that department.

LEARNING NEW SKILLS

- I have learned many new valuable skills with my time at Vac2Go. I've been through several training programs through the company for both 10,000PSI and 20,000PSI water blasting, as well as 40,000PSI free-lancing. I've greatly improved my mechanic and refinishing skills learned at ATC by applying them on the job daily.

WISELY USED TIME

- At Vac2Go, we do not use official time sheets on a daily basis. We have a direct-deposit payroll system that we turn our own hours in for the week before. I learned to keep track of my own time on the job without a clock doing it for me. Since January, I have turned over 550 hours during my internship. At the point of over 120 hours, it stops being an internship and transforms into being gainfully employed. My experience at Vac2Go has impacted me greatly and I hope to keep learning with more experience.
