What Is UCI

Universal Components Inc was founded in 1984 and through the years of experience , have mastered the art of quality and excellence in their products which over time has become an entire line of hydraulic and pneumatic components

What I learned

During my time working at UCI I have gained a lot of knowledge on the principles of basic engineering , learned how to work a variety of machinery and , how to efficiently work with their printing programs.

A vast majority of my experience from UCI was a hands on experience where I assembled valves to their appropriate actuator and condo connectors.
